Education

Skidmore College, Saratoga Springs, NY, Graduated 2026

Major: Computer Science

Minor: Business

Major GPA: 3.4

Relevant Coursework

Foundations of Machine Learning (CS316)

- Implemented machine learning algorithms using NumPy and PyTorch through hands-on labs
- Built and evaluated ML models using gradient descent, support vector machines, and neural networks

Software Design (CS226)

- Implemented logging and unit testing in large code bases, focusing on scalability and code quality.
- Utilized design patterns, JUnit, and JaCoCo frameworks.

Design and Analysis of Algorithms (CS305)

- Designed algorithms for complex problems, emphasizing time and memory efficiency.

Business and Organizational Management (MB107)

- Developed business strategies, financial plans, and rollout initiatives, with an emphasis on collaborative project management.

Relevant Experience

IT Intern, Voya Financial, Windsor, CT

June 2025–August 2025

- Developed and maintained robotic process automations in UiPath and C# to streamline operations and improve data accuracy.
- Refactored existing automations for greater reliability and performance, integrating dynamic logging and exception handling systems.
- Implemented OCR-based email parsing and helped to train machine learning models for communications mining, enabling more dynamic automation workflows.
- Collaborated across IT and business teams to translate complex operations into scalable automation pipelines.
- Participated in community outreach initiatives, promoting company-wide volunteer engagement.

Instructor, ID Tech, Harrison, NY

June 2024–August 2024

- Managed groups of students aged 14–18, fostering collaboration and engagement in technical projects.
- Delivered machine learning courses covering foundational concepts in Python, TensorFlow Keras, NumPy, and data preprocessing.
- Guided students through the development of hands-on projects, including neural networks and multithreaded applications.
- Adapted teaching methods to accommodate diverse learning styles and technical backgrounds.

Intern, JDM Import Co, Manhattan, NY

June 2022–August 2022

- Conducted detailed market and pricing analysis, identifying customer trends to drive product strategy.
- Gained hands-on experience with MongoDB by assisting data analysts in storing, cleaning, and processing large datasets.
- Supported project management tasks by organizing team deliverables and tracking milestones

Projects

Byte Chat

Go, Bubble Tea, TCP, SQLite, TLS

- Built a secure terminal-based chat application in Go with a self-hosted architecture and encrypted communication.
- Designed a custom TCP communication layer with payload framing, request-response synchronization, and persistent connections.
- Developed a terminal UI using the Bubble Tea framework, implementing structured message handling and session management.

Life Logger

JavaScript, Node.js, SQLite, HTML, CSS, Digital Ocean, Nginx

- Built a full-stack web application for tracking daily activities and analyzing habits over time.
- Constructed backend APIs to record entries, aggregate statistics, and help users identify behavioral trends across customizable time frames.

Dynamic Image Compression

Python, Flask, Vue.js, NumPy

- Built a full stack application around a custom image compression algorithm originally developed for a dynamic programming algorithms assignment.
- Implemented a flask backend for image processing and a Vue frontend for image upload and compression controls.

Activities & Achievements

- **3rd Place**, Kenneth A. Freireich Entrepreneurship Competition: Developed a multiplatform app and comprehensive business strategy.

Skills

Programming Languages: Java, Python, JavaScript, Typescript, C, Go, C#

Tools & Technologies: AWS, SQL, TensorFlow, NumPy, Linux, Excel, Node.js, Kanban, Git, Bash, Pytorch, Pandas, DigitalOcean, UiPath, Wireshark
