Education

Skidmore College, Saratoga Springs, NY, Graduated 2026

Major: Computer Science

Minor: Management and Business

Relevant Coursework

Foundations of Machine Learning (CS316)

Software Design (CS226)

Design and Analysis of Algorithms (CS305)

Business and Organizational Management (MB107)

Relevant Experience

Robotic Process Automation Intern, Voya Financial, Windsor, CT

June 2025–August 2025

- Developed and maintained robotic process automations in UiPath and C# to streamline operations and improve data accuracy.
- Refactored existing automations for greater reliability and performance, integrating dynamic logging and exception handling systems.
- Implemented OCR-based email parsing and helped to train machine learning models for communications mining, enabling more dynamic automation workflows.
- Collaborated across IT and business teams to translate complex operations into scalable automation pipelines.

Computer Science Instructor, ID Tech, Harrison, NY

June 2024–August 2024

- Managed groups of students aged 14–18, fostering collaboration and engagement in technical projects.
- Delivered machine learning courses covering foundational concepts in Python, TensorFlow Keras, NumPy, and data preprocessing.
- Guided students through the development of hands-on projects, including neural networks and multithreaded applications.
- Adapted teaching methods to accommodate diverse learning styles and technical backgrounds.

Data Analytics Intern, JDM Import Co, New York, NY

June 2022–August 2022

- Conducted detailed market and pricing analysis, identifying customer trends to drive product strategy.
- Gained hands-on experience with MongoDB by assisting data analysts in storing, cleaning, and processing large datasets.
- Supported project management tasks by organizing team deliverables and tracking milestones

Projects

Claim Analysis

Go, React, Vite, Claude Haiku, Voyage, OpenAlex, Semantic Scholar, PubMed

- Built a full-stack fact-checking application that extracts factual claims from user-provided text and evaluates them against reputable academic and scientific sources.
- Designed a hybrid RAG pipeline that fetches source material, chunks documents, caches Voyage API embeddings, and ranks retrieved evidence passages using semantic similarity and lexical overlap.
- Used Claude Haiku to score claims against retrieved evidence, generating risk levels, explanations, and source-backed results.

Byte Chat

Go, Bubble Tea, TCP, SQLite, TLS

- Built a secure terminal-based chat application in Go with a self-hosted architecture and encrypted communication.
- Designed a custom TCP communication layer with payload framing, request-response synchronization, and persistent connections.
- Developed a terminal UI using the Bubble Tea framework, implementing structured message handling and session management.

Life Logger

JavaScript, Node.js, SQLite, HTML, CSS, Digital Ocean, Nginx

- Built a full-stack web application for tracking daily activities and analyzing habits over time.
- Constructed backend APIs to record entries, aggregate statistics, and help users identify behavioral trends across customizable time frames.

Dynamic Image Compression

Python, Flask, Vue.js, NumPy

- Built a full stack application around a custom image compression algorithm originally developed for a dynamic programming algorithms assignment.
- Implemented a flask backend for image processing and a Vue frontend for image upload and compression controls.

Activities & Achievements

- **3rd Place**, Kenneth A. Freireich Entrepreneurship Competition: Developed a multiplatform app and comprehensive business strategy.

Skills

Programming Languages: Java, Python, JavaScript, TypeScript, C, Go, C#

Tools & Technologies: AWS, SQL, TensorFlow, NumPy, Linux, Excel, Node.js, Kanban, Git, Bash, PyTorch, Pandas, DigitalOcean, UiPath, Wireshark, AI-assisted development tools
