Education

Skidmore College, Saratoga Springs, NY, Graduated 2026
Major: Computer Science
Minor: Management and Business

Relevant Experience

Product Engineer, **Atlantic Group**, New York, NY
August 2026–Present

- Develop and maintain an internal CRM using Python and React, building features for client management and workflow automation.
- Manage production infrastructure on Railway and Render using Docker and GitHub Actions, implementing PostgreSQL database synchronization and disaster recovery systems.
- Build an LLM-powered code auditing system that constructs a shared codebase ontology through engineer-guided analysis, enabling independent agents to detect and resolve architectural contradictions before code is merged.

Contract Software Engineer, **Asaply**, New York, NY
June 2026–August 2026

- Refactored Go and TypeScript backend APIs and workflows to simplify data handling and improve reliability.
- Helped establish GitHub workflow, code review, and CI/CD guardrails to improve maintainability in a fast-moving startup environment.

Robotic Process Automation Intern, **Voya Financial**, Windsor, CT
June 2025–August 2025

- Developed and maintained robotic process automations in UiPath and C# to streamline operations and improve data accuracy.
- Refactored existing automations for greater reliability and performance, integrating dynamic logging and exception handling systems.
- Implemented OCR-based email parsing and helped to train machine learning models for communications mining, enabling more dynamic automation workflows.

Computer Science Instructor, **ID Tech**, Harrison, NY
June 2024–August 2024

- Taught machine learning courses covering foundational concepts in Python, TensorFlow/Keras, NumPy, and data preprocessing.
- Guided students through the development of hands-on projects, including neural networks and multithreaded applications.

Projects

Claim Inspector
Go, React, Vite, Claude Haiku, Voyage, OpenAlex, Semantic Scholar, PubMed

- Built a full-stack fact-checking application that extracts factual claims from user-provided text and evaluates them against reputable academic and scientific sources.
- Designed a hybrid RAG pipeline that fetches source material, chunks documents, caches Voyage API embeddings, and ranks retrieved evidence passages using semantic similarity and lexical overlap.

Byte Chat
Go, Bubble Tea, TCP, SQLite, TLS

- Built a secure terminal-based chat application in Go with a self-hosted architecture and encrypted communication.
- Designed a custom TCP communication layer with payload framing, request-response synchronization, and persistent connections.
- Developed a terminal UI using the Bubble Tea framework, implementing structured message handling and session management.

Life Logger
JavaScript, Node.js, SQLite, HTML, CSS, DigitalOcean, Nginx

- Built a full-stack application to record entries, aggregate statistics, and help users identify behavioral trends across customizable time frames.

Dynamic Image Compression
Python, Flask, Vue.js, NumPy

- Built a full-stack application around a custom image compression algorithm originally developed for a dynamic programming algorithms assignment.

Skills

Programming Languages: Go, TypeScript, Python, C, JavaScript, Java
Frameworks & Databases: REST APIs, Node.js, React, PostgreSQL, SQLite, SQL
Tools & Platforms: Linux, Git, Bash, Docker, GitHub Actions, AWS, GCP, Railway, Render, DigitalOcean, Nginx, UiPath
ML/Data: TensorFlow, NumPy, PyTorch, Pandas, RAG, Embeddings

Relevant Coursework

Foundations of Machine Learning (CS316)
Software Design (CS226)
Design and Analysis of Algorithms (CS305)
Business and Organizational Management (MB107)
