Education

Skidmore College, Saratoga Springs, NY, Graduated 2026

Major: Computer Science

Minor: Management and Business

Skills

Programming Languages: Go, TypeScript, Python, C, JavaScript, Java

Backend & Databases: REST APIs, Node.js, SQLite, SQL

Tools & Platforms: Linux, Git, Bash, DigitalOcean, Nginx, UiPath, AWS, GCP

ML/Data: TensorFlow, NumPy, PyTorch, Pandas, RAG, Embeddings

Relevant Coursework

Foundations of Machine Learning (CS316)

Software Design (CS226)

Design and Analysis of Algorithms (CS305)

Business and Organizational Management (MB107)

Relevant Experience

Contract Software Engineer, Asaply, New York, NY

June 2026–Present

- Refactor Go and TypeScript backend APIs and workflows to simplify data handling and improve reliability.
- Help establish GitHub workflow, code review, and CI/CD guardrails to improve maintainability in a fast-moving startup environment.

Robotic Process Automation Intern, Voya Financial, Windsor, CT

June 2025–August 2025

- Developed and maintained robotic process automations in UiPath and C# to streamline operations and improve data accuracy.
- Refactored existing automations for greater reliability and performance, integrating dynamic logging and exception handling systems.
- Implemented OCR-based email parsing and helped to train machine learning models for communications mining, enabling more dynamic automation workflows.

Computer Science Instructor, ID Tech, Harrison, NY

June 2024–August 2024

- Taught machine learning courses covering foundational concepts in Python, TensorFlow Keras, NumPy, and data preprocessing.
- Guided students through the development of hands-on projects, including neural networks and multithreaded applications.

Data Analytics Intern, JDM Import Co, New York, NY

June 2022–August 2022

- Conducted detailed market and pricing analysis, identifying customer trends to drive product strategy.
- Gained hands-on experience with MongoDB by assisting data analysts in storing, cleaning, and processing large datasets.

Projects

Claim Analysis

Go, React, Vite, Claude Haiku, Voyage, OpenAlex, Semantic Scholar, PubMed

- Built a full-stack fact-checking application that extracts factual claims from user-provided text and evaluates them against reputable academic and scientific sources.
- Designed a hybrid RAG pipeline that fetches source material, chunks documents, caches Voyage API embeddings, and ranks retrieved evidence passages using semantic similarity and lexical overlap.

Byte Chat

Go, Bubble Tea, TCP, SQLite, TLS

- Built a secure terminal-based chat application in Go with a self-hosted architecture and encrypted communication.
- Designed a custom TCP communication layer with payload framing, request-response synchronization, and persistent connections.
- Developed a terminal UI using the Bubble Tea framework, implementing structured message handling and session management.

Life Logger

JavaScript, Node.js, SQLite, HTML, CSS, Digital Ocean, Nginx

- Built a full-stack application to record entries, aggregate statistics, and help users identify behavioral trends across customizable time frames.

Dynamic Image Compression

Python, Flask, Vue.js, NumPy

- Built a full stack application around a custom image compression algorithm originally developed for a dynamic programming algorithms assignment.
